

**This information leaflet has been handed out to you because it has been noted that the pub's Sky Digibox is set up incorrectly and as a result, you're losing a *third* more of the available transmitted picture!**

**Solution:**

1. On the Sky remote, press Services
2. Press 4 (**System Setup**)
3. Press 1 (**Picture Settings**)
4. Press the Left cursor key once to change **Picture Format** from 4:3 to **16:9**
5. Press the Up cursor key and Select to **Save New Settings**.
6. You're now done. Press Sky to return to the last TV channel you were viewing. You can now boast that you show **true** widescreen pictures, unlike 90% of your rivals who have absolutely no idea what they're doing wrong!!

Remember that not all TV channels and programmes are broadcast in widescreen (like Sky Sports News), but Sky Sports, Sky/BBC News and Channels 1-5 are all usually shown in widescreen the majority of the time. The RBS Six Nations rugby will be shown in widescreen.

For further and detailed information, visit <http://www.radiofeeds.co.uk/wide>
